**Utopia** can satisfy your passion for design, providing the latest in colour video doorphone technology.

**Utopia:** Your interior designer

# UTOPIA DOORPHONE

The Utopia doorphone is an evolution of the aesthetic profile of the video doorphone and the desire of Urmet Domus to design a new product with innovative characteristics and reduced dimensions.

The doorphone uses the same handset of the video doorphone and features adjustable call volume, mute function highlighted by a red flag signal and an additional button for supplementary services.

Utopia is the first Urmet Domus doorphone to include a loud speaker for calls, guaranteeing a clear call tone in your home..

Its ergonomic and linear shapes give Utopia compact dimensions of (H225 x L90 x D47mm) and allow for a firm grip of the handset.

Thanks to the cord with telephone plug, the handset can be detached from its base facilitating installation.

The ease of installation is also enhanced by the sliding track terminal strips and fixing of the door phone to a 503 box.

The doorphone is fitted with 3 additional buttons in addition to the standard one for opening the door, making it possible to control another 3 supplementary services.

The Utopia accessories, like the table support, make the doorphone suitable for any environment, satisfying all kinds of requirements.

# UTOPIA VIDEO DOORPHONE

Video doorphone with a 4" TFT display that guarantees brilliant, perfect viewing from any angle.

The profile is reduced to only 55 mm of projection.

A loudspeaker dedicated to calls ensures a loud pleasant sound, which can be adjusted by a specific switch (high/low/mute) located under the lower flap. The "mute" function excludes calls and turns on a green LED, on the side of the display.

The door open button is backlit and remains on for the entire time the display is on. A red LED signals the entry door has remained open.

All Utopia functions are adjustable: colour and brightness by sliders positioned on the lower part of the monitor, and contrast by a potentiometer positioned under the lower flap.

3 buttons for supplementary services are available, such as secondary door opening, turning on of stair lights, etc.

Urmet Domus technology allows you to connect more video doorphones in parallel and to create intercommunicating systems with up to 4 devices.

Utopia with handset can be used in analogical and digital systems like Digivoice and 2GO!

In its handsfree version the general features of the video doorphone remain the same as those of the Classic model.

Without the handset the video doorphone is even more reduced in size: only 53 mm which become 16 mm in the wall-embedded version.

Utopia handsfree features backlit audio and door open buttons: the first is green, the second amber.

They remain backlit for the entire time the display is on. Pressing the audio key the green LED turns on at the side of the display.

The Utopia handsfree makes it possible to communicate with the outside in 2 ways: hands-free or key pressed.

In the first case the audio key is pressed once and depressed when the conversation is over; in the second case the audio key must be pressed for the entire time of the conversation.

Utopia avails of another 2 buttons for auxiliary services, placed under the sliding top, which can be used to open secondary doors, turn on stair lights etc.

In the wall-embedded version Utopia is fixed with a frame, covering any imperfection that may have been left by previous installations.

The Utopia handsfree video doorphone can be used in analogue systems and in some digital systems, like Digivoice

# UTOPIA HANDSFREE

Utopia offers limitless customisation of its products. Its vast range of colours due to its interchangeable masks makes it possible to match the colour of the product to the furnishings.
